
Shulman Rogers negotiates successful Radio System Rebanding for Martin County, Florida

Alan Tilles, Chair of the Telecommunications Department of Shulman Rogers, worked with Motorola Solutions, Inc. , Pallans Associates and Richard Jenkins, Martin County's Radio Systems Manager to successfully complete the 800 MHz radio system rebanding for Martin County, Florida. All major reconfiguration milestones of the County's rebanding project to reconfigure its Public Safety Radio system as required by the Frequency Reconfiguration Agreement with Sprint/Nextel have been met. This project was mandated by the FCC in a nationwide program in which the cost was covered by Sprint/Nextel. Alan's understanding of how our radio system works from a technical standpoint, and his ability to leverage his knowledge of land mobile radio and rebanding, resulted in a smooth a transition as Martin County could have hoped for.
